## Burglary Safes

Ergonomic, stylish, customisable: Fichet-Bauche burglary safes offer you much more than best-in-class protection against theft.

Domestic burglaries occur every second around the world. Burglaries at businesses are also increasingly on the rise. As a result, you want to ensure that your most theft-prone items enjoy the protection offered by the most high-quality safes on the market today.

The Fichet-Bauche burglary safes provide best-in-class protection against burglary, fire and explosives to the highest international standards in security. From ergonomic features that enhance your personal comfort to elegant finishings and customisable options, you can choose from a variety of premium safes that meet your precise needs in terms of security, design and capacity.

## Deposit Safes

An optimised workflow and reduced risk of robbery are just the beginning: Fichet-Bauche's deposit safes take your cash-management processes to the next level.

For small businesses, banks and retail outlets, cash management can be time-consuming and costly. It also increases the threat of armed robberies. As a result, business owners and managers are increasingly looking to protect their staff from robbery while optimising in-store cash-handling processes.

The Fichet-Bauche deposit safes offer a variety of compact, functional and user-friendly models, all of which ensure the high level of security you expect from Fichet-Bauche.

## Fire Safes

An important investment to secure your irreplaceable documents and data media: Fichet-Bauche's fire safes deliver the very best in fire protection on the market today.

Every year, thousands of businesses are victims of fire, which costs a lot in damage. And companies eventually go out of business. Since your important paper documents and digital media are particularly vulnerable to the threat of fire, a fire protection solution could be one of the most important investments you make.

The Fichet-Bauche range of fire safes offers premium fire protection in a variety of user-friendly, reliable and ergonomic models, all of which are tried and tested in accordance with the most stringent international security standards.

## Locking systems

To ensure that a safe, a vault or a door can deliver a certain level of graded protection, it must be fitted with a locking system which matches that specific standard.

The Fichet-Bauche brand is associated to a long expertise of lock manufacturing that combines ergonomics, design and patented security technology to offer graded resistance.

From key locks to electronic locking, all Fichet-Bauche solutions have been certified A2P and EN 1300, and can be fitted individually or in conjunction with one another.

## Modular Safes

Simplified transport, assembly and installation for your most hard-to-reach or atypical locations: Fichet-Bauche's modular safes combine the flexibility you want with the high level of security you need.

Many organisations choose to secure their valuables in a highly reliable location. However, as buildings vary in size, traditional security solutions are sometimes unable to adapt to specific space and weight constraints. And even if they can, these solutions often lack the rigorous security standards you need for optimal peace of mind.

The Fichet-Bauche offering of modular safes combines the convenience you want with the high level of security you expect from Fichet-Bauche. The flexible design is composed of smaller, flat-packed components that are ideal for simple assembly and installation in a variety of different locations.

## Safe Deposit Lockers

Elegance meets a user-friendly approach to high security for personal valuables: Fichet-Bauche's safe deposit lockers deliver an unrivalled user experience.

Many bank customers rely on safe deposit lockers to protect their valuable possessions, including gemstones, family heirlooms, wills, property deeds, and other confidential documents, from theft. But they also want ultra-secure and private access to their valuables in an easy-to-use and convenient solution.

The Fichet-Bauche safe deposit lockers combine performance and accessibility to simplify the customer experience as much as possible. Each unit optimises personal comfort via an elegant design and ergonomic features.

## Storage Cabinets

The best in adaptability, accessibility and performance in one highly organised solution: Fichet-Bauche's storage cabinets are at the front line of a streamlined and secure workplace.

Most organisations understand that sensitive business documents, including employee records and archives, must be kept secure and confidential. But many of these documents are often critical to day-to-day operations so the ideal security storage solution must also be convenient and easy to use.

The Fichet-Bauche storage cabinets integrate the latest ergonomic features to ensure optimal accessibility for you and your staff while protecting your classified information from theft.

## Vaults and Vault Doors

The highest line of defence against even the most sophisticated attacks: Fichet-Bauche's vaults and vault doors incorporate the best anti-theft technologies on the market today.

A vault is an organisation's highest line of defence against burglary. Unlike traditional safes, it forms an integral part of the building in which it is built. But as thieves continuously develop ever-more sophisticated attack tools, today's vaults must be regularly reinforced to ensure protection to the highest international security standards.

The Fichet-Bauche range of high-security vaults and vault doors is designed using state-of-the-art technologies to resist even the aggressive attacks, including diamond drills and explosives.

## Customer services

Optimise the performance of your organisation's security equipment and solutions: Chubbsafes' range of maintenance, upgrade and retrofit, and auditing services is an invaluable investment for any company.

Security equipment and failures can have a major impact on an organisation's image, reputation and bottom line. This is why many companies invest to ensure their security equipment performs at a high level and their solutions adhere to safety and compliance standards.

The suite of Chubbsafes services meets all of your upkeep, modernisation and evaluation needs. They include maintenance and warranty services to provide preventative and corrective care; retrofit and upgrade services to keep current with the latest technology; and audit services to analyse your security equipment and processes.

[AUDIT](#)[WARRANTY-PLUS](#)[MAINTENANCE](#)[UPGRADE-AND-RETROFIT](#)

## Audit

Avoid security system and policy failure to protect your organisation's reputation and bottom line: Chubbsafes' Audit services provide a structured analysis to ensure optimal performance and compliance.

You understand that security system and policy failure can have a destructive impact on your organisation's reputation and bottom line. You need a comprehensive evaluation of your security systems to help you to identify any structural weaknesses and to respond accordingly – before disaster strikes.

Chubbsafes' Audit services provide a structured analysis of your security systems and processes in terms of performance, utility, effectiveness, efficiency and legal compliance. The Audit services help you rectifying measures, as needed, to ensure peak performance and compliance with all local regulations.

### Your benefits:

- Reduced security systems failures, total cost of ownership and risk of non-compliance with local regulations.
- Significant cost savings for security operations

Home / Customer services / Warranty Plus

## Warranty Plus

Rest assured that your security equipment functions at its full potential throughout its entire lifecycle: Warranty Plus from Chubbsafes provides you with a valuable service partner from the moment of purchase.

You have invested in a premium security product but want to benefit from added support that ensures your equipment is working at full capacity throughout its lifetime.

Warranty Plus from Chubbsafes provides you with a valuable service partner from the moment of purchase. The range of Warranty Plus plans helps you to audit your equipment for any malfunction and, if a problem does arise, resolve it immediately with the help of our engineers.

### Your benefits:

- Choice of Gold or Platinum plans offering various response times and service hours.
- Access to Service Desk and/or Technical Helpdesk

# Maintenance

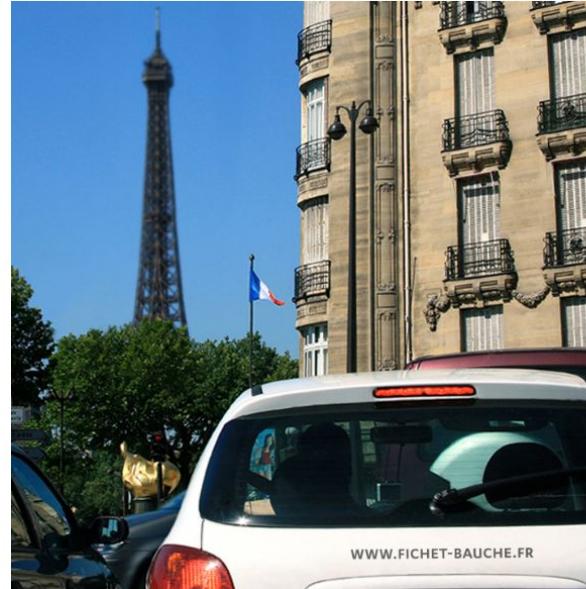

Keep your organisation's security equipment up and running at the highest-possible level: Fichet-Bauche's maintenance services offer three types of service-level agreements for maximum flexibility and peace of mind.

Fichet-Bauche offers comprehensive maintenance services for your security equipment, including the following three types of service-level agreements:

- Preventative: detect errors in advance
- Corrective: diagnose errors and restore your systems to normal
- Performance: ensure peak performance through online real-time monitoring

#### Your benefits:

- Access to Service Desk and/or Technical Helpdesk
- Rapid response time
- Maximum visibility and confidence in your strategic operations

# [Home](#) / [Customer services](#) / [Upgrade and retrofit](#)

## Upgrade and Retrofit

Keep your security equipment up to date while minimising your total cost of ownership: Fichet-Bauche's upgrade and retrofit services replace your obsolete hardware or software, or migrate your equipment to the latest technology.

You want security equipment that is fully up to date to support your business operations and to ensure an extended product lifetime. But investing in a full replacement is simply too costly for your budget.

Fichet-Bauche offers the following two management services:

- **Retrofit:** replace obsolete hardware or software components to keep your equipment operational
- **Upgrade:** migrate your equipment to the latest technology

Your benefits:

- A variety of support stages available ranging from standard to extended
- Up-to-date functionalities that incorporate latest-available technology
- Risk-free implementation that maximises compatibility with existing systems

## All safes are not equal

You all have a number of confidential documents, product valables and services or personal belongings that are important for you or vital to your business. With all of the possible threats that could occur- fire, burglary, ballistic attacks or even explosions - it is prudent to have a recognized security quality. One very significant security measure is to choose tested and certified solutions that authenticate that your valuables are kept in good conditions.

Importantly, the security tests and certifications have to be conducted by independent bodies which certify the reliability of the products for a certain level of resistance according to international standards and classification systems.

This section gives you detailed information about how safes, vaults and security doors undergo tests, which certificates your chosen product has to carry and how you can check that you have a valid burglary, fire, ballistic, explosive or combined-resistance-certification. This credible information is important for insurance companies to decide on the guarantees they can provide you with.

## Test Procedures

### Burglary tests

Safes and vaults undergo tough independent tests which certify them for a certain level of burglary resistance. This level of resistance is given in Grades starting at 0 and, climbing to VI for safes and XII for vaults.

The grade of a safe is particularly important for insurance reasons, as the contents of a safe will only be insured for the correct value if the safe carries the appropriate grade.

To grade a safe, a test must be carried out by an accredited institute. A combination of factors is taken into account including the size and effectiveness of the attack tool or tools used, the time taken and the skill of the person trying to break into the safe.

### Fire Tests

Fire safes undergo extremely tough fire tests to show that they will protect your documents or digital media in case of a fire.

### FIRE ENDURANCE TESTS

The Fire Endurance test simulates the searing temperatures of a real office fire by heating a safe in a furnace to temperatures around 1000°C.

However, in reality, the contents of the safe must not only survive the fire itself, but also the period after a fire has been extinguished. It is important that the safe is still enough to destroy the documents or digital media inside. That is why the test also involves a "cooling period" of several hours. If the contents remain protected during this period, then the safe passes the test.

### FIRE IMPACT TESTS

It is not just the temperature you have to worry about, would your safe survive falling through several floors into a raging fire? With the structural damage a fire inflicts on a building, it's likely to happen. That's why fire safes are also subjected to a Fire Impact test. This shows that the safe will still protect its contents in a severe structural fire.

### Manual Attack tests

These tests are determining the resistance of security doors according to EN 1627 (for windows, doors and shutters) and EN 356 (for security glazing). EN 1627 standard provides 3 resistance tests:

- Resistance to static loading (in accordance to EN 1628 standard)
- Resistance to dynamic loading (in accordance to EN 1629 standard)
- Resistance to manual attacks (in accordance to EN 1630 standard). EN 1630, 6 classification levels are defined based upon tools used (drilling machine, electric tools) and resistance time.

EN 356 standard defines 8 levels for resistance against vandalism objects or attempted manual attacks (from P1A to PSA and from PB2 to PB9).

### Ballistic tests

There are two main standards:

- The EN 1522 standard for windows, doors, shutters and blinds defines 7 resistance levels for pistols, rifles and assault rifles (from FB1 to FB7) and for shotguns (SG6).
- The EN 1397 standard for security glazing specifies 7 resistance levels for pistols, and for pistols and rifles (from BR1 to BR7) and 2 resistance levels for shotguns (SG1 and SG2).

If the level numbers are followed by an "S", it means the security glazing failed the projection test (with splinters). If they are followed by an "NS", it means the glazing passed the test (without splinters).

## Certification

### Recognised laboratories

Fichet-Bauche only uses the most experienced certification bodies to ensure the testing and certification processes are carried out correctly by a trusted and credible organisation:

- [ECB•S \(European Certification Boards of Security, Fire & Life Safety\)](#)
- [SP \(Technical Research Institute of Sweden\)](#)
- [SBSC \(Swedish Fire and Safety Certification\)](#)
- [VdS \(Verband der Sachversicherer\)](#)
- [CNPP \(Centre national de prévention et de protection\)](#)
- [UL \(Underwriters Laboratories\)](#)
- [Bureau of Indian Standards \(BIS\)](#)
- [Saint Etienne's National Test Facility](#)

### Your certificate explained

To attest the quality of a certified product, an information plate is adhere to the inside of the Fichet-Bauche products. This provides you with the guarantees that your acquired product has been tested and manufactured in an environment that has been checked by one of the above certifying bodies.

Examples of labels with the details listed on the plate are available for [burglary](#) and [fire protection](#) for more information.

[Home](#) / General Information / Stay in the loop / FCR - Safeguarding your most important paperwork from fire

## FCR - Safeguarding your most important paperwork from fire

**As a business organisation, you understand that your important paperwork, such as accounting information, contracts, certificates and other sensitive documents, is critical to your activity continuity and simply cannot be lost or destroyed. But your storage space for this type of files is difficult to come by. And even when space is available, a traditional security solution that focuses on burglary protection often leaves these files unprotected from the threat of fire, which can happen when least expected and can spell disaster, and in some cases, bankruptcy.**

FCR fire files from Fichet-Bauche combine efficient storage with the added benefit of fire protection for paper documents for up to one or two hours. All FCR ranges from Fichet-Bauche are tested according to UL 72 standard and are certified at Class 350 levels. They are certified by the Underwriters Laboratory of America, based in Chicago, which is one of the world's most stringent testing authorities. The UL's classifications are globally recognized and accepted.

The FCR fire files are available in one hour and two hours fire endurance and with or without the additional Impact classification.

To ensure fire resistance up to the most stringent international standards, each range is subjected to extensive fire testing or combined fire and impact testing, which simulates the impact of a severe fire. This three-step process includes the following:

- **Step 1**  
The filing cabinet is placed in a furnace and heated to a temperature of 1000°C or over, depending on the certification level. The furnace is switched off after one or two hours, depending on the certification level. The filing cabinet remains in the furnace until the temperature returns to ambient and is subsequently removed. The content is then examined for signs of damage. Both during furnace heating and the subsequent cooling period, the recorded internal temperature must not have exceeded 177°C (or 350°F).
- **Step 2**  
All cabinets are subjected to rapid heating during the explosion or shock test. Cabinets are inserted into a pre-heated furnace to test the strength of construction. During the allotted time duration, internal temperatures are monitored and may not exceed the maximum of 177°C (or 350°F).
- **Step 3**  
Some units are also subjected to impact tests. After a subsequent round of furnace heating, the unit is hoisted nearly 10 metres into the air and dropped on a bed of rubble. It is then placed back in the furnace for further heating. At all times, the internal temperature is measured and must never exceed the 150°C limit. Once opened, the contents must show no signs of damage.

Home / General Information / Stay in the loop / Atrius - the effective answer to burglary protection

## Atrius - the effective answer to burglary protection

The Atrius safe from Fichet-Bauche provides a high degree of protection against burglary and has gone through rigorous testing to demonstrate its efficacy; it was awarded the A2P label by the CNPP (Centre National de Prévention et de Protection) and by the European Certification Board of Security (ECB•S) for Grades IV and V in accordance with the EN 1143-1 European standards. Available in five different sizes, it fits the protection needs of most office and retail environments.

Its versatility is further enhanced by multiple internal organizing options that will maximize the space used. With a variety of mechanical and electronic locks available, all of which have claimed similarly impressive security certifications in accordance with the EN 1300 standards, this quasi-impenetrable safe will raise the insurance coverage of its valuable content to up to 200,000 euros (for the Grade V version).

The Atrius' robustness, however, doesn't diminish its elegance and refined shapes. From ergonomic handles to striking designs and discreet colors, the Atrius combines security and style seamlessly.

The Atrius from Fichet-Bauche is the whole package: versatile and easy to use, but armed with specially patented composite materials and durable steel bolts. Uncompromising.

## Complice - ultimate convenience in one attractive safe

Complice-sz20-002

The new Complice range provides EN 1143-1 burglary and EN 15659 fire protection for your home or office. It is available in four compact sizes and has been designed to provide a stylish, convenient and user-friendly solution to personal or professional security needs. The improved ergonomic features and the variety of customizable fittings enhance personal comfort while ensuring ultimate durability.

### TRIED AND TESTED AGAINST BURGLARY AND FIRE

Complice meets the most rigorous standards for burglary and fire resistance, offering a high level of certified protection for vital documents and valuables. It is constructed from state-of-the-art sheet steel walls that incorporates a reinforced door, an extra-strong mineral composite and robust new hinges. It is secured with a thick steel bolt that reaches the same height as the door.

### SUPERIOR DURABILITY IN A MODERN DESIGN

The new Complice design boasts a stylish grey-blue colour with grey fittings and features an ergonomic handle enabling quick and easy access to valuables while optimizing usability. A wide range of irresistible custom options and fittings, such as LED lighting and glass shelves make it unique for your home or office interior.

### MADE IN FRANCE

Complice delivers on the Fichet-Bauche guarantee; the range is designed and manufactured in France, at the historical French factory of Bazancourt, close to Reims.

## Modular and on-site assembled Optura vaults and vault doors maximised

The Optura vault solution is available in grades ranging from V to XI depending on the level of security required, with the type and number of locks increasing from a single minimum security key lock, up to Class B, C or D high security electronic locks. The range is subjected to tests to meet the EN 1143-1 European security standard. Tests includes a variety of tools, such as crowbars, high-powered disc cutters and oxyacetylene torches. Grade X to XI have been certified for resistance against powerful diamond-core drill bits (CD classification).

### MAXIMISED DESIGN

Optura offers modern design capabilities to meet requirements of new and existing buildings that need a secured area to protect valuables, cash, high-risk items or confidential documents. The vault range is adaptable for most site specifications, from those with space constraints, difficult access, old buildings to rooms with unusual dimensions and floor-load limitations. The new design provides thinner and lighter panels to optimize transportation and mounting costs and maximize available space. The Optura panels are prefabricated to fit a detailed area plan and once made to the required specification, the specially-made vault elements are then delivered to site and assembled. Innovative panel corners make the installation easier and faster as they do not require welding.

### CUSTOMISABLE OPTIONS

Optura vaults and vault doors also offer a variety of reinforced configurations for additional protection and a stylish construction with interior and exterior customized finishes. It is also possible to integrate a series of additional options, such as certified ventilation and/or alarm systems throughout the vault room.

[Home](#) / General Information / Stay in the loop / InviKtus - the name for superior strength and resistance

## InviKtus - the name for superior strength and resistance

The InviKtus premium range of safes delivers the very best in triple-certified protection against burglary, fire and explosives and is available in four protection grades, from grade III to VI, and six sizes per grade. The safes are designed, developed and manufactured in France, in the historical French factory of Bazancourt, near Reims.

Using the latest technology, the InviKtus safes are built with high-protection barrier materials, special reinforcement, and intelligent boltwork construction, providing with high levels of security to resist the most stringent attacks whilst keeping the total weight of the safes to a minimum.

### Certification

Certified EN 1143-1 by the European Certification Board of Security (ECB-S) and awarded the A2p label by the French Centre National de Prévention et de Protection (CNPP) in burglary and explosion resistance, and NT Fire 017-60 Paper by the SP Technical Research Institute of Sweden in fire, InviKtus offers a wide range of mechanical and electronic lock combinations that are all A2p/EN 1300-certified.

### Targeted Customers

Ideal for companies in the banking, retail industries and high-risk sites, InviKtus is supplied from 140- to 1120-litre capacity to suit the storage of a variety of confidential documents or valuable items. Two integrated handles -one opening, one pull- help users to open and to close the safe more easily than ever before.

### Design

The elegant appearance features a stylish dark blue colour with aesthetic shapes and silver handles, which are perfectly fitting the use within any architectural interior style.

[Home](#) / General Information / Quality

## All in the Quality Detail

Fichet-Bauche instils every one of its security products with a unique combination of expertise, innovation and design. Through the development of ever more effective barrier materials and an eye for the aesthetic, each product is born out of a passion to create the best possible creation to protect your valuables.

### THE TESTS ARE MADE ON DIFFERENT FRONTS

1. Product life-cycle tests. The brand is committed to having its solutions certified. Quality controls are performed at every stage of the product development, design, commercial production and manufacturing process. This guarantee of knowledge and technological expertise confirms the Fichet-Bauche brand's commitment to offering the highest quality needed.
2. Tests against manual-attacks, fire resistance, barrier materials, endurance conducted in the plant laboratories in the same conditions as official certification bodies. All solutions tested in the Fichet-Bauche laboratories are compliant with the current European standards.
3. Certification tests carried out by independent laboratories. Fichet-Bauche products are tested for function and durability to ensure they fulfil the quality you expect from Fichet-Bauche brand. All solutions have to pass drop tests, fire tests, burglary tests or explosion tests with extreme resistance requirements.

Fichet-Bauche solutions are designed and manufactured in accordance with the ISO 9001 standard for Quality Management Systems, ISO 18001 for Occupational Health and Safety Management Systems and ISO 14000 for Environmental Management Systems.

### HARMONY OF THE FORM AND FUNCTION

Design is a key element in everything produced with the Fichet-Bauche brand. Each detail of any product is expertly crafted to create a truly elegant and attractive security solution.

But function is never sacrificed for the sake of form. Every aspect of a product, from the door hinges and handle to the lock housing and interior fittings, is ergonomically designed with ease-of-use in mind.

Home / General Information / Sustainability

## Sustainable Innovation

Guinnebo, the Fichet-Bauche's parent company is strongly committed to creating business sustainability at every stage: from product development to after-sales service, each employee working with the brand is aware of his or her responsibility to protect the environment and act in a socially responsible manner.

### ENVIRONMENTAL POLICY AND MANAGEMENT SYSTEM

The objective of our policy is to ensure that all its production units are able to implement environmental management systems in order to fulfil the conditions of ISO standard 14001. This standard lays down the requirements concerning the implementation of an environmental management system (EMS) which enables an organization to define an environmental policy and objectives for improving its environmental performance.

Environmental management procedures are a key component of Guinnebo's environmental mission.

The group has developed an environmental charter which defines the course of action the company must take in terms of the environment. Its aim is to:

- Inform employees and encourage a responsible attitude toward the environment
- Make the group's activities more environmentally-friendly without waiting for legal and official recommendations
- Be mindful of environmental issues and develop new products and production methods
- Endeavour to use resources more efficiently and reduce the use of hazardous substances
- Adopt a positive attitude toward the environment.

Guinnebo has expressed the desire to improve its performance in terms of protecting the environment by:

- Reducing emissions of volatile organic substances
- Optimising energy use in its processes, buildings and movements of goods and people
- Using raw materials and natural resources efficiently
- Optimising the recycling of materials
- Implementing a strategy for the development of environmentally-friendly products (management of energy consumption and use of natural resources throughout the product's life cycle)
- Introducing environmental management systems that comply with ISO 14001 standards at all production units.

### CODE OF CONDUCT AND CORE VALUES

Chubbsafes' reputation and trust placed by its customers, shareholders, partners and employees are essential. Chubbsafes' relationship with its ecosystem is guided by Fundamental Values from the Code of Conduct of its parent company:

- Customer Focus
- Commitment to Quality
- Professionalism
- Integrity
- Cooperation

These Fundamental Values underpin the ethical rules and behaviours that govern the day-to-day activities of all Guinnebo's companies and employees around the world.

## Glossary

### AUDIT TRAIL

The lock is able to give a report in all vary in detail from model to model of usage and may show times of operation, codes used and machine performance.

### Certified Safe

The majority of safes sold under ChubbSafes brand have undergone rigorous testing; the tests and sometimes requirements will differ per safe model, but basically certified, and the highest level of certified safes are called high-grade safe.

### Clearance

Space needed for the leaf to be able to move.

### Deposit box

High-security solution for depositing and storing cash, valuables and documents for bank or retail environments.

### Door closer

Mechanism used to automatically close the door quickly, stopping the door's movement in the final phase. It can be standard arm or slide channel type.

### Doorset

Assembly consisting of the door frame and leaf, together with door hardware (handle, lock, hinges, etc.)

### Doorset code

Allows two users to enter their details before any operation can be performed.

### Duress feature

It is possible for an alarm engineer to link the lock into a monitored alarm system. It is then possible, by a given procedure, to operate the lock, issue a signal and send a signal to the monitoring station that the lock is being forced under duress.

### Electronic lock

An electronically operated keypad lock with a changeable combination.

### Fire Files

The majority of cabinets sold under ChubbSafes brand have undergone rigorous fire tests. When a cabinet passes these tests, it becomes certified.

### High security

Certified high-security electronic lock for safe, vaults and store rooms. That has undergone extensive testing including manipulator test.

### Hinge

Movable and adjustable mechanism that connects the leaf to the frame and enables it to be rotated. It can be single or triple hinged.

### Key lock

A manual key operated lock.

### Left door

In accordance with the EN 13569 standard, the left door is the door that is pulled towards the right/hinged towards the right. It is the door which is opened by a rotational movement, with the hinge on the left side and the handle on the user's side when the user is looking at it from the opening side.

### Manager mode

Allows one user to control the functions of other connected modules.

### Mechanical combination

A mechanical keyless dial lock with a changeable combination.

### Number of users

The number of users able to program in their own access codes.

### Panel

Component which serves as the frame's central panel. It can be solid or glass.

### Right door

In accordance with EN 13569 standard, the right door is the door that is pulled towards the left/hinged towards the left. It is the door which is opened by a rotational movement, with the hinge on the right side and the handle on the user's side when the user is looking at it from the opening side.

### Safe Deposit Lockers

A safe mechanical or electrical locker which is normally found in a vault or an automated machine for storage of notes and other valuable items.

### Time delay

This feature allows for a pre-set delay between opening the lock and being able to open the safe. The operation may only be carried out after the time delay.

### Time lock

This lock allows the user to set periods during which the lock may be operated, e.g. during business hours only. The option available will vary between locks.

## About us

As a forward-looking brand, Fichet-Bauche stands for new, more efficient and more effective methods for protecting your assets.

A great importance has always been placed on research to develop new technologies and materials that can add value to Fichet-Bauche products. This is why the brand is one of the most prestigious names in security with a history that spans three centuries.

## History

1825

Alexandre Fichet opens a locksmith in Paris.

1840

Fichet creates the first modern fire-resistant lock. Demand for it becomes so high that Fichet has to open two new factories in Lyon and Marseille.

1862

Alexandre Fichet dies and the company changes hands.

1864

Auguste-Nicolas, an expert in fire-resistant materials, founds the first safe production factory in Quaix-en-Chartreuse.

1879

The Fichet Company builds its first bank vault containing deposit boxes for hire.

Bauche provides a memorable demonstration, enclosing the equivalent of €110,000 in gold in the safe before setting it on fire. The banknotes emerged unburnt.

1895

Bauche's new "Vivachat" safe, which is both fire-resistant and anti-explosion - is an international success.

1917

A new Fichet factory opens in Genéve, followed a couple of years later by new factories in Italy, Argentina, Spain, Romania and Brazil.

1927

The Fichet Company installs its first alarm and surveillance networks for a manufacturing site.

1967

After many years as pioneers in their respective sectors, Fichet and Bauche merge.

1999

Fichet-Bauche is acquired by the Groupe Neo Security Group.

2007

Fichet-Bauche launches Metalia safe providing dual protection against burglary and fire thanks to the innovative metal composite material. The Metalia safe, which is lighter than Bauche barrier material, offers certified security and reduced weight decreasing installation and transportation costs for the customer.

2010

The Bauche safe opened 100 years after it was invented in Colombia. The "centenary safe" which is a non-combustible safe with a triple lock system. On 31 October 1911, three keys locked the safe that was brought from Bogota to the Presidential Palace. The safe was given to the President of the Republic, Dr. Gómez as the Archishop of Bogota and the second Notary. One of the keys was lost and the safe remained closed for 99 years. In 2010, it turned out that the last notary, when retiring, took the key with him by mistake. The safe was then opened for the first time since 1911, dying as he had to children to keep the key safe until the safe could be opened again. The safe was then closed again. According to the safe's manufacturer, the safe will open again in 2011.

In September 2010, a new Fichet-Bauche safe, among a series of events and media about Bogota's history is locked and donated to the National Museum of Colombia. The safe has been donated to the National Museum of Colombia. The safe is based on the HS-2000 model.

2010

Novo expands the Fichet-Bauche product portfolio, providing the most demanding customers with the only safe to feature an automated opening and closing system with GOST fire safety certification.

2014

The InvKart safe is launched, providing triple certification against burglary, fire and explosion. State-of-the-art protection technology all in one product.

2015

Fichet-Bauche overhauls its graphic identity. Based on the brand's long evolution through the years, the new graphic identity is a modern, dynamic and elegant graphic and can feature on all types of communications media.

[Home](#) / General Information / Manufacturing Facility

## Made in France production

Auguste-Nicolas Bauche, one of the historical founders of the Fichet-Bauche brand started to manufacture fire-resistant products in Gienne close to Reims. By 1900, the fire-resistant production was moved closer to home area in the Bazancourt plant.

[Back to the history...](#)

1820

Alexandre Fichet opens his first workshop for keys in Paris.

1864

Auguste-Nicolas Bauche starts manufacturing fire-resistant products in Gienne close to Reims.

1904

Bazancourt plant is built.

1967

Merging of Fichet and Bauche companies.

1987

Compagnie de Navigation Maritime takes over Fichet-Bauche company

1990

Gemalto Security Group takes over Fichet-Bauche company

2000

Bazancourt becomes the expertise centre for the burglary-resistant safe.

2007

Bazancourt is officially registered as Gemalto Bazancourt.

Technical expertise at the leading edge of progress

Gemalto Bazancourt now produces a full range of security solutions, from security cabinets, the-resistant safes, burglar-resistant safes, to fire-resistant safes, vaults and key and electronic locking systems.

The plant integrates an R&D department specialised in security solutions. Gemalto Bazancourt concentrates efforts on research and development of new barrier materials, new technologies and new processes, as well as local adaptations for institutional clients. The Bazancourt R&D department has been able to anticipate market needs by developing specific solutions for both industrial and security attacks.

Opened in 1904, Gemalto Bazancourt technology laboratory, Bazancourt plant boasts and R&D team made up of experienced engineers whose mission is to design high-resistant safes and vaults, as well as to optimise production and reduce expenses.

Gemalto Bazancourt plant is well known for its ability to manufacture quantities, from small quantities to large productions to small batches. The factory is currently able to offer a wide range of different products ranging available in 360 models and sizes.

Recognised for its diverse product range, Gemalto Bazancourt is able to offer unique strengths in the significant added-value portfolio, providing technical solutions to meet the needs of its institutional clients.

In addition to the production division, Gemalto Bazancourt is capable to conduct in-plant testing, such as manual attacks, fire resistance, barrier material testing, endurance tests and the severe conditions as official certification laboratories.

### Bazancourt plant in numbers

#### PLANT FACTS

- 34,000 m<sup>2</sup>
- 185 employees
- Top of the line equipment: punching machines, laser cutting, plasma cutting, sheet metal forming, bending stations, welding robots, spray painting lines, powder coating lines, hot dip galvanising lines

#### PLANT OUTPUT

- 10,000 safes
- 4,000 security cabinets
- 1,500 doors
- 600 cash-in-transit machines
- 100 high security deposit boxes/ vaults

#### PLANT CERTIFICATIONS

- ISO 9001 Quality Management System
- ISO 14001 Environmental Management System
- OHSAS 18001 Safety Management System
- Certified labels: A2P / ECB-S / GS / LPCB / SP / UL
